热气体过滤

04.

最近，钢铁、能源、有色冶金行业迅速发展，生产过程中产生了大量含有粉尘颗粒的热气体，如果直接排放到空气中，必定会污染环境。因此，热气体过滤对环境保护至关重要。

目前市场上普遍使用有机纤维除尘袋。这种除尘滤袋重量轻，价格低廉。然而，它对高温的抵抗力较差，容易损坏。当滤袋上形成蛋糕状物时，会导致堵塞，不易清洁。

市场上还有陶瓷纤维、玻璃纤维等无机纤维滤袋。陶瓷纤维具有良好的耐高温和耐腐蚀性能，但在温度突然升高时易断裂。玻璃纤维具有高强度，但折叠抗力和耐磨性较差。

博顿如何解决？

博顿提供3种金属热气体过滤器。这些过滤器不仅可以有效地克服有机纤维过滤袋存在的高温抗性差、易损坏等缺点，还可以克服陶瓷纤维和玻璃纤维的缺点。金属过滤器可以承受高温或酸碱腐蚀性气体等恶劣的过滤环境，并且在其他非金属材料上具有明显的优势。

Seal Fittings

Seal Gasket

The filter is sealed by tightly compressing the seal gasket onto the back of the flange to the upper surface of the installation plate. The roughness of the upper surface of the installation plate and the fitting surface of the flange shall be well designed to perfectly match with the chosen seal gasket as it directly determines whether the seal is reliable and leak-free.

Metal seal gasket

Semi-metallic seal gasket

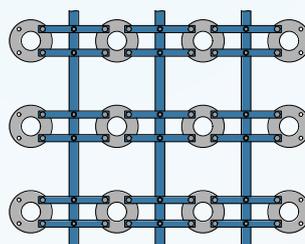

Asbestos rubber seal gasket

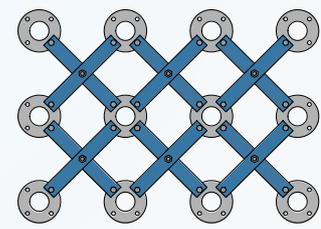

PTFE seal gasket

Hold Down Bar

Hold down bars are the seal fittings between flange holes and the installation plate for fixing. Both parallel and cross hold down bars are available for your option.

Strengthened Hot Gas Cleaning Filter

We offer strengthened hot gas cleaning filter with good thermal shock resistance to meet your demands on hot gas dust removal.

Strengthened hot gas cleaning filter features large flux, low resistance and fast filtration speed. It can reduce the chemical reaction of organic molecules, reduce the clogging and make the back flush or pulse dust removal much easier. It uses a cage skeleton as a supporting structure to increase its strength. The flange connection design ensures the sealing effect and prevents the leakage.

Filter Media Production Flow

Generally, FeAl or TiAl is made into metal powder blanks by molding or cold isostatic forming. And then the surface is coated and vacuum sintered.

Standard Hot Gas Cleaning Filter

We can offer sintered porous candle filter with good air permeability and stable separation effect to meet your chemical filtration demands.

Standard hot gas cleaning filter is a kind of filter bag made of metal powder by sintering into flexible metal powder sintered filter sheet, then cut into suitable size to fit for the cage bone, and welded to the cage bone. Its filtration efficiency is 2 times of the bag filter under the same working conditions and resistance. A metal ring is welded at the opening of the flexible metal membrane for installation and positioning. Hexagonal metal gasket is used for the sealing of the metal ring and the installation plate to prevent the leakage of dust removal gas.
