BOEDON Brochure

Aquarium filter inlet protector keeps small fish or other debris in the aquarium from being sucked into the inlet.

Aquarium filter inlet protector is a device used to protect the aquarium filter inlet. It prevents small fish or other debris in the aquarium from being sucked into the inlet, thus preventing the filter from being damaged or the filtration effect being reduced as a result. In addition, the protective cover can also play a role in beautifying the aquarium, so that the aquarium is more neat and beautiful.
